Why we believe in Sierra Stone

Sierra Stone has been used for over 30 years and counting! Established in 1978, Sierra Stone is a decorative stone and epoxy overlay used to cover any hard surface. This product is most commonly used on concrete; however, it may also be used over tile, wood and fibreglass. Sierra Stone is NOT an artificial product but composed of North America's most beautiful natural stone & pebbles. Sierra Stone derives its strength and durability from an application of the best quality epoxy, one of the strongest bonding materials created by modern scientific technology. It creates a uniquely beautiful surface suitable for porches, patios, walkways, pool decks, basements, and even driveways. The natural stone blends well with most surroundings to make it very versatile and looks great on surfaces that have cracks or low areas. Epoxy stone is very economical when compared to the options of a new deck, tile, brick pavers, etc. It's easy to clean and maintain as well.

Sierra Stone is a true indoor/outdoor, multi-surface solution. It can be used everywhere from driveways, walkways, sidewalks, patios, decks, pool decks, steps and interior applications. We resurface retail spaces, showrooms, entrances, corporate offices and recreation facilities. Due to the advanced artistic techniques that we have perfected over the years, we are able to provide our clients with creative solutions; transforming interior and exterior concrete, new or old, into a beautiful, functional surface. With proper care and careful planning, a very unique inviting space awaits!

» **Colors, Borders and Designs:**

With six (6) main colours but numerous combination blends and texture possibilities, there is a perfect color scheme for everyone. Mixing the different stone colors allows for approximately eighteen (18) total blends that can be offered to Sierra Stone customers. The Sierra Stone product can be installed over existing surfaces like concrete, tile and vinyl. Decorative borders, logos and custom designs can easily be created using different color stones, adding elegance and value to your stonework.

» **Installation Time:**

Every application is different depending on size and the required surface preparations. Typically most residential applications are complete in 1 to 2 days. There is no need to remove your old surface. We guarantee a clean installation with no damage to your landscaping and no mess left for you to clean up.

» **Warranty & Maintenance:**

Sierra Stone has a 3-year limited warranty on materials and workmanship. Minimal maintenance, such as a recoat of epoxy every 2 to 3 years, can help make this product last for a lifetime, although the frequency of this application is dependent on the usage and traffic of the area.

» **Durability:**

The stone and specially formulated epoxy combination can last for years with minimal maintenance. Our product has been tested for strength, for wear, the freeze/thaw cycle, discoloration and flammability by Ortech of Toronto, Ontario and met or exceeded all standards. We have tested and proven that our product can work in the harsh Canadian climate. Sierra Stone has also been tested for ultra-violet ray breakdown by Artech Testing Labs of Chantilly, Virginia U.S.A. and our results exceeded that of other products.

» **Stain Resistant, Non-Slip and Puddle Free:**

Due to the porous nature of the stone, water and other liquids pass through the stone surface and will drain with the existing grade to eliminate puddles. Translucent silica grit is sprinkled over the Sierra Stone during installation to further enhance a non-slip surface. The epoxy coats the stone making it stain resistant, so that liquids like gas and oil will not stain the surface. Clean up is quick and easy.

» **Repairable:**

This will be the last surface you will ever have to buy. If the Sierra Stone product cracks, it is because the surface underneath the layer of Sierra Stone has shifted or settled. This is not a problem as Sierra Stone is the only covering that can be easily repaired at an inexpensive cost. These repairs are done by removing the stone from the damaged area and then refilling it with new stone and epoxy in original Sierra Stone color, making the repair virtually unnoticeable.

» **Sierra Stone Features:**

- Existing surface DOES NOT have to be removed
- Distinctive appearance
- Prohibits mildew growth
- Stain resistant
- Excellent traction (non-slip)
- Resistant to the potential damage from pets
- Non-allergenic
- Incredible durability in high traffic areas
- Porous
- Short installation time
- Cost-effective
- Variety of colours
- Design flexibility - borders & artistic graphics
- Repairable
- 3 year limited warranty on materials/workmanship
- Stain proof

Why we believe in Rubber Stone

Rubber Stone is a unique product that is similar to Sierra Stone in application. The difference is that Rubber Stone uses recycled rubber chips and a polyurethane binding agent, so it is soft, far more flexible than Sierra Stone, and every 25 sq. ft. of installed product keeps 3 tires out of the landfill! Rubber Stone is a great product for surfaces that continually shift such as decks, asphalt, packed gravel, driveways, and damaged or aged concrete. Rubber Stone is a porous product which allows liquids to pass through it. Allowing water to pass through the surface feeds the roots of adjacent trees and shrubs eliminating the common root damage found in asphalt and concrete applications.

» **Rubber Stone Features:**

- 100% recycled product
- Six (6) bold colors and also 100% black can be used in many commercial applications
- Flexible surface, porous
- Can be used to cover packed gravel, asphalt, damaged concrete and pavers

Why we believe in Rubber Tiles

Rubber tile flooring is one of the most versatile flooring materials available today. This rubber tile flooring provides uniform colour, non-laminated surfaces, and lasting wear qualities. Rated as sustainable and environmentally friendly, our Rubber Tile is exceptionally durable, resilient, and resistant to scuffs, scratches, and indentations. Easy to install and maintain, the surface finish provides remarkable slip and stain resistance for areas where rubber traditionally hasn't been an option. Life-cycle costs have proven to be well below most other flooring materials, especially carpet.

It provides an excellent solution for home gyms, child care, recreational and commercial applications.

» Rubber Tile Features:

- Excellent impact and sound absorbing qualities
- Four (4) bold colors that can be used in many commercial applications
- 100% post-consumer recycled content
- Interlock or glue down squares
- Extreme durability
- 10 year warranty

Why we believe in EnduraFlake

EnduraFlake floors are commercial grade, which makes them strong, durable, and stain-resistant. With four (4) colour options, you can give your old concrete a brand new look without outlandish costs. This is a perfect solution for your garage, basement, workshop, or commercial space. An EnduraFlake floor will look fantastic in your garage and it will stay that way. Oil and gas won't stain it, and hot tires won't pull it off like some off-the-shelf epoxy paints. This product has also proven itself as an effective flooring option for industrial high traffic areas such as airplane hangars and warehouses where forklifts and other heavy equipment put extreme stress on the floors beneath them. Maintenance is easy with a quick rinse with water and a non-filming detergent like TSP. A thorough cleaning can be accomplished with a mop or brush and mild solvents. You can even wax this product for a showroom-quality shine!

» EnduraFlake features 3 parts: A base coat, the flake pattern and the top coat.

- Industrial Performance
- Easy to maintain
- Seals concrete
- Eliminates concrete dust
- Brightens up your space
- Interior applications only
